

Context Combination Verification Report (entire_contract - erc1155)

This table summarizes the performance of different context combinations for the assistant on the ERC1155 contract verification task, using the 'entire_contract' approach.

- **context**: The context combination used for the run.
- **verification_rate**: Fraction of runs that were successfully verified (higher is better).
- **min_success_iterations**: Minimum number of iterations needed to achieve a successful verification (lower is better).
- **max_iterations**: Maximum number of iterations used in any run.
- Other columns show averages and counts for each context.

context	verification_rate	verified_count	total_runs	avg_time	avg_iterations	min_success_iterations	max_iteratio
erc20_erc721_erc1155	100.00	10	10	67.38982698917388	0.5	0.0	2
